19. Quick-Reference: All Features Table

---

1. Platform Overview

Verity is a decentralized freelance marketplace on Ethereum. Clients post jobs, freelancers bid, payments are held in smart contract escrow, and disputes are resolved by community voting. Everything (payments, reputation, reviews) lives on-chain — no middleman.

Key Concepts:

- **ETH** = real money (Ether cryptocurrency) used for payments, bounties, insurance, crowdfunding
- **VRT (Verity Reputation Token)** = soulbound (non-transferable) reputation points earned by working on the platform
- **Escrow** = a smart contract that holds the client's ETH safely until work is complete
- **On-chain** = stored permanently on the blockchain, visible to everyone, cannot be edited or deleted

---

2. Getting Started (Wallet & Profile)

Connecting Your Wallet

Item	Details
What	Connect MetaMask wallet to the platform
Where	Click "Connect Wallet" button in the top-right navbar
Input	MetaMask popup → approve connection
Output	Your wallet address appears in navbar, shows your ETH and VRT balances
Network	Must be on Hardhat Local (Chain ID 31337) or Sepolia Testnet (11155111)
Note	A wrong-network warning badge appears if you're on the wrong chain

Creating Your Profile

Item	Details
What	Set up your on-chain identity
Where	Click your address in navbar → "My Profile" → "Set Up Profile"
Inputs	**Name** (text), **Bio** (text), **Skills** (comma-separated, e.g., "Solidity, React, Design")
Output	Profile page shows your name, bio, skills, and stats (all zeroes initially)
Optional	Set avatar via IPFS URL
Costs	Gas fee only (no ETH payment)
Note	One profile per wallet address. Can be updated anytime.

---

3. Jobs — The Core Marketplace

Creating a Job (as Client)

Navigate to **Jobs** page → click **"+ Post a Job"** in the navbar, or go to `/jobs?create=true`.

Field	Required	Description	Example
Title	Yes	Short name for the job	"Build a DeFi Dashboard"
Description	Yes	Detailed explanation of what you need done	"I need a React dashboard that shows..."
Category	Yes	Pick one: Web Dev, Mobile, Design, Writing, Marketing, Data, Blockchain, AI/ML, Other	"Web Dev"
Budget	Yes	Amount in ETH you're willing to pay	0.5
Deadline	Yes	Days until the job listing closes for new bids (default: 30)	30
Expected Days	No	How many days you expect the work to take	14
Sealed Bidding	No	Toggle ON = freelancers can't see each other's bids (only their own)	OFF (default)
Milestones	No	Break the job into phases with separate payments (amounts must sum to budget)	Milestone 1: "Design" — 0.2 ETH, Milestone 2: "Development" — 0.3 ETH

Output	Details
On success	Job appears in "Open Jobs" tab with status **Open**
On-chain	`JobCreated` event emitted; job gets a unique Job ID
Cost	Gas fee only (no ETH locked yet — that happens when accepting a bid)

Viewing Jobs

Tab	What It Shows
Open Jobs	All jobs with status "Open" — available for bidding

My Jobs	Jobs you posted as a client
My Work	Jobs where you are the hired freelancer

Each job card shows: title, status badge (color-coded), category, budget (ETH), deadline, posted date, and a lock icon if sealed bidding is enabled.

---

4. Bidding on Jobs

Placing a Bid (as Freelancer)

Click on any **Open** job → the detail modal opens → scroll to "Place a Bid".

Field	Required	Description	Example
Bid Amount	Yes	How much ETH you want to be paid (can be more or less than the budget)	0.45
Completion Days	No	How many days you'll need to finish the work	10
Proposal	Yes	Your pitch — why you're the right person for this job	"I have 3 years of React experience and..."

Output	Details
On success	Your bid appears in the job's bid list
Rules	One bid per freelancer per job. If `Min VRT to Bid` is set (admin config), you need that many VRT tokens to bid.
Sealed bidding	If enabled, other freelancers cannot see your bid — only the client sees all bids
Cost	Gas fee only

Withdrawing a Bid

Item	Details
Who	The freelancer who placed the bid
When	Only while the job is still **Open**
Action	Click "Withdraw" on your bid in the job detail modal
Output	Bid is deactivated

Accepting a Bid (as Client)

Item	Details
Who	The client who posted the job
Where	Job detail modal → click "Accept" on the desired bid
What happens	You must send ETH equal to the bid amount. This ETH goes into **Escrow** (held by smart contract). Job status changes to **In Progress**. All other bids are deactivated.

Cost	Bid amount in ETH + gas fee
Output	Job moves to "In Progress", freelancer is assigned

---

5. Job Lifecycle (After Bid Accepted)

Once a bid is accepted, here's the complete flow:

```
Open → [Bid Accepted] → In Progress → [Freelancer Delivers] → Delivered
                              ↓                                    ↓
                        [Client Cancels]                [Client Completes] → Completed
                              ↓                         [Client Requests Revision] → back to In
Progress
                         Cancelled                      [14 days pass, no action] → Auto-Released →
Completed
                              ↓
                        [Either party raises dispute] → Disputed → [Voting] → Resolved → Completed
```

Available Actions by Status

In Progress

Action	Who	What It Does	Inputs
Deliver Job	Freelancer	Marks the job as "Delivered" and starts a 14-day auto-release timer	None (just click)
Cancel Job	Client	Cancels the job. Freelancer gets refunded but client pays a 5% penalty	None
Raise Dispute	Client or Freelancer	Opens a dispute (see Section 7)	Reason text
Propose Settlement	Either party	Propose a mutual money split without going to dispute	% complete (0-100), Freelancer's share % (0-100)
Chat	Client or Freelancer	Open the job chat room	—
Video Call	Either party	Opens a Jitsi video call room	—
Task Board	Freelancer (edit) / Client (view-only)	Kanban board to track sub-tasks	—
Sub-Contract	Freelancer	Delegate part of work to someone else (see Section 9)	—

Delivered

Action	Who	What It Does	Inputs
Complete Job & Release Payment	Client	Approves the delivery. ETH released from escrow to freelancer (minus platform fee). Both parties earn VRT reputation tokens.	None
Request Revision	Client	Sends job back to "In Progress" — freelancer must re-deliver	None
Tip Freelancer	Client	Send extra ETH as a bonus	ETH amount

Auto-Release	Anyone (after 14 days)	If the client hasn't acted for 14 days, anyone can trigger auto-release to complete the job	None

Completed

Action	Who	What It Does	Inputs
Write Review	Both parties	Leave a 1-5 star review + comment (stored on-chain, permanent)	Star rating, comment text
Tip Freelancer	Client	Send extra ETH tip	ETH amount

Settlement (Mutual Agreement)

Instead of going to a dispute, either party can propose a settlement:

Step	Action	Details
1	**Propose Settlement**	One party enters: "% of work complete" and "freelancer's share %". Example: 60% complete, freelancer gets 60%
2	**Other Party Responds**	Accept → funds are split per the agreed percentages. Reject → proposal cancelled, parties can try again or raise dispute
3	**Result**	If accepted: freelancer gets their % (minus platform fee), client gets the rest. Job is completed.

---

6. Milestones

If a job was created with milestones, the payment is broken into phases.

Step	Who	Action	What Happens
1	Freelancer	**Submit Milestone** (click "Submit" on a milestone)	Milestone status → "Submitted"
2	Client	**Approve Milestone** (click "Approve")	The milestone's ETH portion is released from escrow to the freelancer. Milestone status → "Approved"
3	(repeat)	Complete all milestones	—
4	Auto	When ALL milestones are approved	Job auto-completes. Both parties earn VRT.

Milestone Status	Meaning
Pending	Not started yet
In Progress	Work has begun
Submitted	Freelancer has submitted work for this phase
Approved	Client approved; payment released for this phase

---

7. Disputes & Voting

This is one of the most important features. When client and freelancer can't agree, a dispute is raised and the community votes to resolve it.

Dispute Flow (Step by Step)

```
Raise Dispute → Response Phase (3 days) → Voting Phase (5 days) → Resolution
                                                                        ↓
                                                                If "Re-Proportion" wins → New voting round
                                                                If Client/Freelancer wins → Funds split
                                                                If no votes → Escalate to Admin
```

Phase 1: Raising a Dispute

Item	Details
Who can raise	Client or Freelancer (on an "In Progress" job)
Input	Reason/description text explaining why you're raising the dispute
Output	Dispute created with status "Response Phase". Job status → "Disputed". 3-day timer starts.
Where	Job detail modal → "Raise Dispute" button

Phase 2: Response Phase (3 days)

Action	Who	Details
Submit Response	The OTHER party (non-initiator)	Write your side of the story. This advances the dispute to Voting Phase.
Submit Evidence	Either party	Provide IPFS hash/link to supporting evidence (screenshots, files, etc.)
Set Proportion Demand	Either party	Enter what % of the escrow funds you believe you deserve (0-100%)
Withdraw Dispute	Initiator only	Cancel the dispute → job returns to "In Progress"
Escalate to Admin	Either party (after 3-day deadline passes with no response)	Skip voting, let admin decide

Phase 3: Voting Phase (5 days)

Action	Who	Details
Cast Vote	Any third party (not the client or freelancer)	Choose one of three options: **Vote for Client**, **Vote for Freelancer**, or **Vote for Re-Proportion**
Set/Update Proportion Demand	Client or Freelancer	Adjust what % you want (important for re-proportion rounds)
Submit Evidence	Either party	Can still add evidence during voting

Voting Rules:

- Only people who are NOT the client or freelancer can vote
- Each person gets one vote per voting round
- If `Min VRT to Vote` is set, voters need that many VRT tokens
- Voters who vote with the winning side earn **2 VRT** as a reward

Who Can See What During Voting

Person	Can See Vote Tallies?	Can Vote?
Client (party in dispute)	YES — sees vote counts for all three options	NO
Freelancer (party in dispute)	YES — sees vote counts for all three options	NO
Everyone else	NO — sees a "voting in progress" message but NOT the vote counts	YES — can cast their vote

> ***Important:*** *The vote tallies (how many votes each side has) are HIDDEN from third-party voters. Only the two parties in the dispute can see the running totals. This prevents "bandwagon voting" — voters must decide independently without being influenced by which side is winning.*

Phase 4: Resolution

After the 5-day voting deadline:

Outcome	What Happens
Client wins (most votes)	The client's proportion demand is used. Example: client demanded 70% → client gets 70% of escrow, freelancer gets 30%
Freelancer wins	The freelancer's proportion demand is used. Example: freelancer demanded 80% → freelancer gets 80%, client gets 20%
Re-Proportion wins	No one wins yet! The voting resets to a new round. Both parties can adjust their demands. Community votes again.
Tie	Client wins (client advantage on ties)
No votes at all	Either party can escalate to admin

Dispute Status Reference

Status	Meaning
Response Phase	Waiting for the other party to respond (3-day window)
Voting Phase	Community is voting (5-day window)
Resolved	Voting completed, funds distributed
Auto-Resolved	14 days passed with no action, system resolved automatically
Withdrawn	Initiator cancelled the dispute
Escalated to Admin	Admin will decide the outcome

Dispute Tabs (Filter)

Tab	Shows
Active	Disputes in Response Phase or Voting Phase
Resolved	Disputes that have been settled
Mine	Disputes where you are client or freelancer

All	Every dispute

Auto-Resolution (Safety Net)

If a dispute has been open for 14 days with no resolution:

- **If no votes were cast** → The non-initiator (the person who didn't raise the dispute) wins
- **If votes exist** → The side with the majority wins

---

8. Bounty Board

Bounties are open tasks that anyone can attempt. Unlike jobs (1 client → 1 freelancer), bounties can have multiple winners.

Creating a Bounty

Field	Required	Description	Example
Title	Yes	Name of the bounty task	"Write a tutorial for our API"
Description	Yes	What needs to be done	"Create a step-by-step guide..."
Category	Yes	Type of work	"Writing"
Reward	Yes	Total ETH reward (sent with transaction, locked in contract)	0.3
Deadline	Yes	Date by which submissions must be made	2026-04-01
Max Winners	Yes	How many people can win (≥ 1)	3

Output	Details
On success	Bounty appears on the Bounties page with "Open" status
Cost	Reward ETH (locked in contract) + gas fee
Payout	Each winner gets: Total Reward ÷ Max Winners. Example: 0.3 ETH / 3 = 0.1 ETH per winner

Submitting Work on a Bounty

Item	Details
Who	Anyone except the bounty poster
When	Before the deadline, while bounty is "Open"
Inputs	**Description** (what you did), **IPFS Proof** (link/hash to your work)
Rule	One submission per person per bounty

Reviewing Submissions (as Poster)

Action	What It Does
Approve	Winner gets their share of ETH + 5 VRT minted as reputation reward
Reject	Submission rejected, no payout

When the number of approved submissions equals Max Winners, the bounty auto-completes.

Cancelling a Bounty

Rule	Details
Time limit	Only within 15 minutes of creation
Condition	No submissions exist yet
Effect	Remaining ETH refunded to poster

---

9. Sub-Contracting

A freelancer who has been hired for a job can delegate part (or all) of the work to another freelancer.

Two Modes

Mode	How It Works
Direct Assignment	You know who to assign → enter their wallet address when creating
Open Listing	Leave the sub-contractor address empty → other freelancers can browse and apply

Creating a Sub-Contract

Field	Required	Description	Example
Parent Job ID	Yes	The job you want to sub-contract from	3
Sub-Contractor Address	No	Wallet address of the person (leave empty for open listing)	0x1234...abcd or empty
Work Description	Yes	What the sub-contractor needs to do	"Design the UI mockups"
Payment	Yes	ETH amount (sent with transaction, locked in contract)	0.1

Sub-Contract Lifecycle

```
Created → [Direct: Active immediately / Open: Wait for applications] → Active → Submitted → Approved (paid)
  ↓
[Cancel at any time before approval → refund]
```

Step	Who	Action
1 (Direct)	—	Sub-contract created as "Active"
1 (Open)	Freelancers	Browse open listings, click "Apply"
2 (Open)	Primary freelancer	View applicants, click "Assign" on one
3	Sub-contractor	Click "Submit Work" when done
4	Primary freelancer	Click "Approve & Release Payment" → ETH sent to sub-contractor

Cancel	**Primary freelancer can cancel if status is Open or Active → ETH refunded**

---

10. Governance & Proposals

The platform has a DAO (Decentralized Autonomous Organization) for community decision-making.

Viewing Governance Stats

The governance page header shows:

- **Treasury Balance** — ETH collected from platform fees
- **Your VRT Balance** — your voting power
- **Total Proposals** — how many proposals have been created
- **Min VRT to Propose** — minimum VRT needed to create a proposal (default: 100)
- **Voting Period** — how long voting lasts (default: 5 days)
- **Quorum** — minimum % of total VRT supply that must vote for the result to count (default: 10%)

Creating a Proposal

Field	Required	Description	Example
Title	Yes	What the proposal is about	"Reduce platform fee to 1%"
Description	Yes	Detailed explanation	"The current 2% fee is too high..."

Requirement	**Must hold ≥ Min VRT to Propose (default 100 VRT)**
Output	Proposal appears as "Active" with a voting deadline

Voting on a Proposal

Item	Details
Who	Anyone with VRT tokens (must hold > 0)
Options	**Vote For** or **Vote Against**
Weight	Your vote weight = your VRT balance. Platinum tier users get 2× weight.
When	While proposal is Active and before the deadline
One vote	You can only vote once per proposal

Finalizing a Proposal

Item	Details
When	After the voting deadline has passed
Who	Anyone can click "Finalize"
Result	If "For" votes > "Against" votes AND quorum is met → **Passed**. Otherwise → **Rejected**

Proposal Statuses

Status	Meaning
Active	Voting is open
Passed	Majority voted For + quorum met

Rejected	Majority voted Against, or quorum not met
Executed	Admin executed the passed proposal
Cancelled	Proposer or admin cancelled it

---

11. Crowdfunding

Community members can create crowdfunding campaigns for projects.

Creating a Crowdfunding Project

Field	Required	Description	Example
Title	Yes	Project name	"Open-Source Freelancer Tools"
Description	Yes	What the project is about	"Building a suite of tools..."
Category	Yes	Product, Tool, Research, Community, Education, or Other	"Tool"
Proof/Docs Link	Yes	URL to project documentation or proof	"https://docs.google.com/..."
Goal Amount	Yes	ETH target to raise	5.0
Duration	Yes	Days the campaign will run	30

Requirement	**Must hold ≥ 5 VRT (default)**
Output	Project appears as "Active" with a progress bar (0% funded)

Contributing to a Project

Item	Details
Who	Anyone except the project creator
Input	ETH amount to contribute
Output	Progress bar updates. When total raised ≥ goal → status changes to "Funded"

Project Lifecycle

Status	What Can Happen
Active	Contributions accepted. Creator can post updates. Creator can cancel.
Funded	Goal reached! Creator can withdraw funds (one-time). Creator can post updates.
Failed	Deadline passed without reaching goal. Anyone can mark it failed. Contributors can get refunds.
Cancelled	Creator cancelled. Contributors can get refunds.

Posting Updates (Creator Only)

Input	**Description + optional link**

Output	Update appears in the project's detail section with timestamp

---

12. Insurance Pool

Freelancers can buy insurance to protect themselves in case of payment disputes.

How It Works

1. Freelancer pays a **premium** (ETH) to buy an insurance policy
2. The policy gives **coverage** = premium × 3 (multiplier)
3. If a dispute is resolved in the freelancer's favor (client at fault), the admin/dispute system can **file a claim** → freelancer gets paid from the pool
4. If no claim is filed, freelancer can **withdraw their premium** back after the policy expires (90 days)

Buying Insurance

Field	Required	Description	Example
Premium	Yes	ETH to stake (minimum 0.01 ETH)	0.1

Output	Details
Coverage	Premium × 3. So 0.1 ETH premium = 0.3 ETH coverage
Duration	90 days
Cost	Premium ETH + gas fee

Policy Actions

Action	Who	When	What Happens
File Claim	Admin or Dispute contract	During active policy period	Freelancer receives coverage amount (or pool balance if pool is low)
Withdraw Premium	Freelancer (policy owner)	After policy expires AND no claim was filed	Premium returned to freelancer
Fund Pool	Anyone	Anytime	Add ETH to strengthen the insurance pool

Policy Statuses

Status	Meaning
Active	Policy is valid, can be claimed
Claimed	Claim has been paid out
Withdrawn	Premium has been returned
Expired	Policy period ended (can now withdraw premium)

---

13. VRT Reputation Loans

If you need VRT tokens (e.g., to meet a minimum bid requirement) but haven't earned enough yet, you can borrow them.

Taking a Loan

Field	Required	Description	Example
Amount	Yes	VRT to borrow (max 50 VRT)	20

What You Send	**ETH collateral. Calculated as: (amount ÷ 10, rounded up) × 0.005 ETH. Minimum: 0.005 ETH**
Example	Borrow 20 VRT → collateral = 2 × 0.005 = 0.01 ETH
Output	VRT minted to your wallet. Loan appears in your loan dashboard.

Loan Rules

Rule	Details
Max loan	50 VRT
Duration	30 days to repay
One at a time	You can only have one active loan
Repayment	Earn VRT by completing jobs, then use it to repay. Repayment burns the VRT from your wallet.
Full repayment	When loan fully repaid → collateral ETH returned to you
Default	If 30 days pass and loan not repaid → anyone can mark you as "Defaulted"
Default consequence	Collateral forfeited permanently. You can NEVER take another loan. "Defaulted" status shown on your dashboard.

Loan Statuses

Status	Meaning
Active	Loan is ongoing, timer running
Settled	Fully repaid, collateral returned
Defaulted	Time expired, collateral lost, permanently flagged

---

14. User Profile, Reviews & Achievements

Profile Stats

Every user's profile shows:

Stat	Meaning
Jobs Done	Total jobs completed
VRT Tokens	Current VRT balance
ETH Earned	Total ETH earned as freelancer
ETH Spent	Total ETH spent as client
Avg Rating	Average star rating from reviews

Writing Reviews

Item	Details
When	After a job is completed
Who	Both client and freelancer review each other
Inputs	Star rating (1-5: Poor / Fair / Good / Very Good / Excellent) + comment text
Output	Review permanently stored on-chain. Visible on the reviewee's profile.
Rule	One review per person per job. Cannot review yourself. Cannot edit or delete.
Prompt	After completing a job, a review prompt appears. It may be mandatory (cannot skip).

Skill Endorsements

Item	Details
What	Endorse another user's skill (like a LinkedIn endorsement)
Where	Visit someone's profile → "Endorse Skill"
Inputs	Skill name + optional Job ID (the job you worked together on)
Rule	Cannot endorse yourself. One endorsement per (endorser, user, skill) combo.
Output	Endorsement appears on the user's profile, grouped by skill

Portfolio

Item	Details
What	Showcase your work
Where	Your own profile → "Add Portfolio Item"
Inputs	Title, IPFS link (to the work), optional Job ID
Output	Portfolio item displayed on your profile with clickable IPFS link

Achievements (Gamification)

Achievements are unlocked automatically based on your activity:

Achievement	How to Unlock
🏆 **First Job**	Complete your 1st job
⭐ **Experienced**	Complete 5 jobs
🎖️ **Veteran**	Complete 10 jobs
💯 **Perfect Score**	Receive a 5-star review
✍️ **Reviewer**	Submit your first review
🤝 **Endorsed**	Receive your first skill endorsement
📁 **Showcase**	Add your first portfolio item
🔥 **Popular**	Receive 5 reviews

🎯 **Bounty Hunter**	Complete a bounty
💰 **Top Earner**	Earn 1 ETH total on the platform

---

15. Chat & Task Board

Job Chat

Item	Details
What	Direct messaging between client and freelancer for a specific job
Where	Job detail modal → "Chat" button (or from navbar link)
Who can access	Only the client and the assigned freelancer for that job
Inputs	Type a message (Enter to send, Shift+Enter for new line). Attach files (max 1MB).
Output	Messages appear as chat bubbles (blue = yours, white = theirs) with timestamps
Storage	Messages are stored in your browser's localStorage — NOT on the blockchain. Messages sync across tabs on the same computer.
Images	Attached images render inline in the chat
Read-only	Chat becomes read-only when the job is completed or cancelled

Task Board (Kanban)

Item	Details
What	A personal to-do tracker for managing sub-tasks within a job
Where	Job detail modal → "Task Board" button
Columns	To Do → In Progress → Done
Actions	Add task (type + Enter), drag-and-drop between columns, move with arrow buttons, delete
Who can edit	Freelancer only. Client can view in read-only mode.
Storage	localStorage (per job) — not on-chain

---

16. VRT Token & Tier System

VRT (Verity Reputation Token) is a **soulbound** token — it CANNOT be transferred to another person. You can only earn it by working on the platform.

How to Earn VRT

Activity	VRT Earned
Complete a job (as client or freelancer)	10 VRT each
Win a bounty submission	5 VRT
Vote on a dispute (winning side)	2 VRT

VRT Loan (temporary, must repay)	Up to 50 VRT

Tier System

Your tier is based on **total VRT ever earned** (not current balance — burning tokens doesn't lower your tier).

Tier	Total VRT Earned Required	Platform Fee Discount	Governance Vote Weight
🥉 **Bronze**	0	0% (full 2% fee)	1×
🥈 **Silver**	50	25% off (1.5% fee)	1×
🥇 **Gold**	200	50% off (1% fee)	1×
💎 **Platinum**	500	75% off (0.5% fee)	2×

What VRT Unlocks

Feature	VRT Requirement
Bid on jobs (if configured)	Min VRT to Bid (admin-set, default 0)
Vote on disputes	Min VRT to Vote (admin-set, default 0)
Create governance proposals	100 VRT
Create crowdfunding projects	5 VRT
Lower platform fees	Automatic via tier
Stronger governance votes	Platinum = 2× weight

---

17. Admin Panel

The Admin Panel is only accessible to the account that has the `ADMIN_ROLE` on the smart contracts (typically the deployer).

Location: Navbar → Other → Admin Panel

Configurable Parameters

Section	Parameter	Default	Description
Jobs	Auto-Release Period	14 days	Days after delivery before auto-payment
Jobs	Reputation Reward	10 VRT	VRT minted to both parties on job completion
Jobs	Cancel Penalty	500 BPS (5%)	% penalty when client cancels an in-progress job
Jobs	Min VRT to Bid	0	Minimum VRT required to place a bid
Fees	Platform Fee	200 BPS (2%)	Fee taken from freelancer's payment
Fees	Max Fee Cap	500 BPS (5%)	Maximum allowed platform fee
Disputes	Response Period	3 days	Time for opponent to respond
Disputes	Voting Period	5 days	Duration of community voting
Disputes	Auto-Resolve Deadline	14 days	Safety timeout for unresolved disputes

Disputes	Voter Reward	2 VRT	VRT reward for voters on winning side
Disputes	Min VRT to Vote	0	Minimum VRT to participate in dispute voting
Governance	Min VRT to Propose	100 VRT	Minimum VRT to create proposals
Governance	Voting Period	5 days	Proposal voting duration
Governance	Min Quorum	1000 BPS (10%)	Minimum % of total VRT supply that must vote
Governance	Min VRT to Crowdfund	5 VRT	Minimum VRT to create crowdfunding projects
Insurance	Coverage Multiplier	3×	Coverage = premium × this number
Insurance	Policy Duration	90 days	How long a policy is active
Insurance	Min Premium	0.01 ETH	Minimum insurance premium
Loans	Max Loan Amount	50 VRT	Maximum borrowable VRT
Loans	Loan Duration	30 days	Time to repay a loan
Loans	Collateral per 10 VRT	0.005 ETH	ETH collateral required per 10 VRT borrowed
Bounties	Bounty VRT Reward	5 VRT	VRT minted per approved bounty submission

Admin-Only Actions

Action	What It Does
Resolve Escalated Disputes	Enter Freelancer % to manually resolve disputes escalated to admin
Withdraw Escrow Fees	Collect accumulated platform fees
Withdraw Treasury	Withdraw ETH from governance treasury
Execute Passed Proposals	Execute proposals that have been voted and passed
Withdraw Forfeited Loan Collateral	Collect ETH from defaulted loans
Mint VRT	Mint VRT to any address (for testing/rewards)
Burn VRT	Burn VRT from any address
Set Tier Thresholds	Change Silver/Gold/Platinum VRT requirements
Set Tier Fee Discounts	Change fee discount percentages per tier

---

18. Notifications

The bell icon in the navbar shows notification count. Notifications are generated automatically:

Type	Trigger	What It Says
🔔 **New Bids**	Someone bids on your open job	"X active bids on Job #Y"
⚠️ **Dispute**	A dispute involves you (response/voting phase)	"Active dispute on Job #Y"
💬 **Chat**	Unread messages from the other party	"Unread messages for Job #Y"
⭐ **Review**	Completed job not yet reviewed	"Review pending for Job #Y"

Click the bell to see all notifications. Click a notification to go to the relevant page. Dismiss individual notifications with the × button.

---

19. Quick-Reference: All Features Table

#	Feature	Page	What It Does	Key Inputs	Key Outputs	Who Can Use

Platform Fee Structure

Item	Rate
Base platform fee	2% of freelancer's payment
Fee discount (Silver)	25% off → effective 1.5%
Fee discount (Gold)	50% off → effective 1.0%
Fee discount (Platinum)	75% off → effective 0.5%
Cancellation penalty	5% of escrow amount (when client cancels In Progress job)
Where fees go	Governance Treasury

Glossary

Term	Meaning
ETH	Ether — the cryptocurrency used for all payments
VRT	Verity Reputation Token — earned by working, cannot be transferred
Escrow	Smart contract vault that holds payment until work is verified
Soulbound	Token that is permanently attached to your wallet and cannot be sent to anyone
Gas Fee	Small ETH cost for every blockchain transaction (paid to network validators)
IPFS	Decentralized file storage — used for evidence and portfolio links
BPS	Basis Points — 100 BPS = 1%, 500 BPS = 5%, 10000 BPS = 100%
Quorum	Minimum voting participation required for a result to be valid
DAO	Decentralized Autonomous Organization — community-governed entity
Sealed Bidding	Bid privacy mode where freelancers can't see each other's bids
Re-Proportion	A dispute vote option that resets voting and lets parties adjust demands
Tier	Your reputation level (Bronze → Silver → Gold → Platinum)
